Session: test_metadata_run_6

Question Analyzed

“How many total orders are there?”

Executive Summary

The system attempted to execute a SQL query to count total orders but failed because the specified relation does not exist in the database.

The agent tried to run a SQL query to count the total number of orders from the 'uploaded_data_82017810' relation. However, this relation does not exist in the database, resulting in a failure. The root cause of this issue is that the relation name might be incorrect or the data might not have been uploaded correctly. To resolve this, the user should verify the relation name and ensure that the data is correctly uploaded to the database.

Confidence: Low

Key Insights

Non-Existent Relation

The relation 'uploaded_data_82017810' does not exist in the database, which caused the SQL query to fail.

Recommendations

Verify Relation Name and Data Upload

Check the relation name for any typos or errors and ensure that the data is correctly uploaded to the database. If the issue persists, try to upload the data again or use a different relation name.
